

"The automated Solid Data solution saves us time and money and gives us peace of mind"

Solid Data Storage in Action

Brindabella Childcare Centre

As a large private childcare centre in the Tuggeranong Valley in the south of Canberra, Brindabella Childcare Centre looks after 110 families in 6 rooms, with 19 Permanent staff working there. The Centre knows the value of the critical business information. That's why it chose Solid Data's market leading backup and recovery technology. Solid Data has helped to protect their business information, and has provided peace of mind during times of disaster and heightened awareness in the national capital.

As computers become more highly used within businesses, the value of the data that is stored on them becomes much more valuable to the business owners. The value of the embedded knowledge to the business, along with the salaries of the employees who entered the data, the lack of paper copies, and an increased reliance on the computer all increase the value of the information.

The owners at Brindabella know the value of their information. They use Centre Calc software, and know that the information is critical to the success of their operations.

The Challenge

After seeing the Solid Data Storage solution demonstrated, Brindabella saw the benefits to them of using Solid Data to automatically back up their information. They decided to make use of Solid Data, because the peace of mind they would get from the guarantee of having their data securely backed up.

The owners of Brindabella went on a well deserved break prior to using Solid Data 's solution. Unfortunately a computer crash was experienced resulting in data loss and required many hours of Data entry.

The Benefits of the Solid Data Solution

Thanks to Solid Data, Brindabella gets a number of benefits from increased information protection. Their data is automatically, securely and regularly backed up to an offsite location. Brindabella gets peace of mind from knowing that their data is secure for when they need it, and they save money by not having staff do backups.

Donna, Centre Owner at Brindabella adds "Our information is essential to running our centre, and our staff can now get on to looking after the children and not have to worry about backups"
