## **For Your Peace of Mind – Please Undertake this Simple Install to our New Advanced Backup Software!!**

**You will now get increased reliability, integrity and reporting, and thus better peace of mind!**

**NB: If you have any problems with this – please call me on 1300 734 044.**

We have recently understood from our stakeholders that you want better reliability from our service. To make that happen we went out and found software that is a million miles in front of the old software you were used to.

The process now is to install the new software and start backing up using it. Please do the following steps to get started:

1. On the Solid Data Web Site ([www.soliddata.com.au](http://www.soliddata.com.au)), go to the Free Trial Signup page.
2. download and install the version that suits your operating system (in most cases it is the 32-bit version for Windows XP). When installing simply use all default options. Click on "Finish" to move to the setup.
3. After Installation the Startup Wizard will start. In the first screen tick the "**https**" box, then enter ***backup.solidit.net.au*** in the Address Box. Click Next.
4. Select a username and password for your new backup account (make sure you write these details down somewhere to keep - the password will be ESSENTIAL to getting your data back if you need it). Enter your email address. Click "Submit".
5. Click "Next". Go through and tick the folders you need to back up. Note the ones at the top are preset common folders, but you can untick them if you don't need them backed up. Once you have made selections, click "Next"
6. Click "Properties" to edit the backup time. Enter your time to run the backup, then click "OK" then "Next".
7. Click "Next", then Click "Finish".

8. Click the "Save Setting" button on the top left of the window. Close the application (say yes to saving any setting changes).

9. You will have a trial account quota of 1Gb of space. If you require more, please email me your username or ring me so I can make sure your account has the correct quota available to you.

10. right-click on the OBM icon down in your system tray, and select Backup, then All Backup Sets (you may want to do this step as you leave at the end of the day).

And that's it - ALL DONE!

I will be in touch with you when it is time to remove the old software.

**Check out what one of our clients said recently:**

*Solid Data took my worries away. I have always worried about fires, computer crashes and lightning surges... Solid Data Storage has taken those worries away because my data will be there. Susannah, Business Coach, Canberra .*
